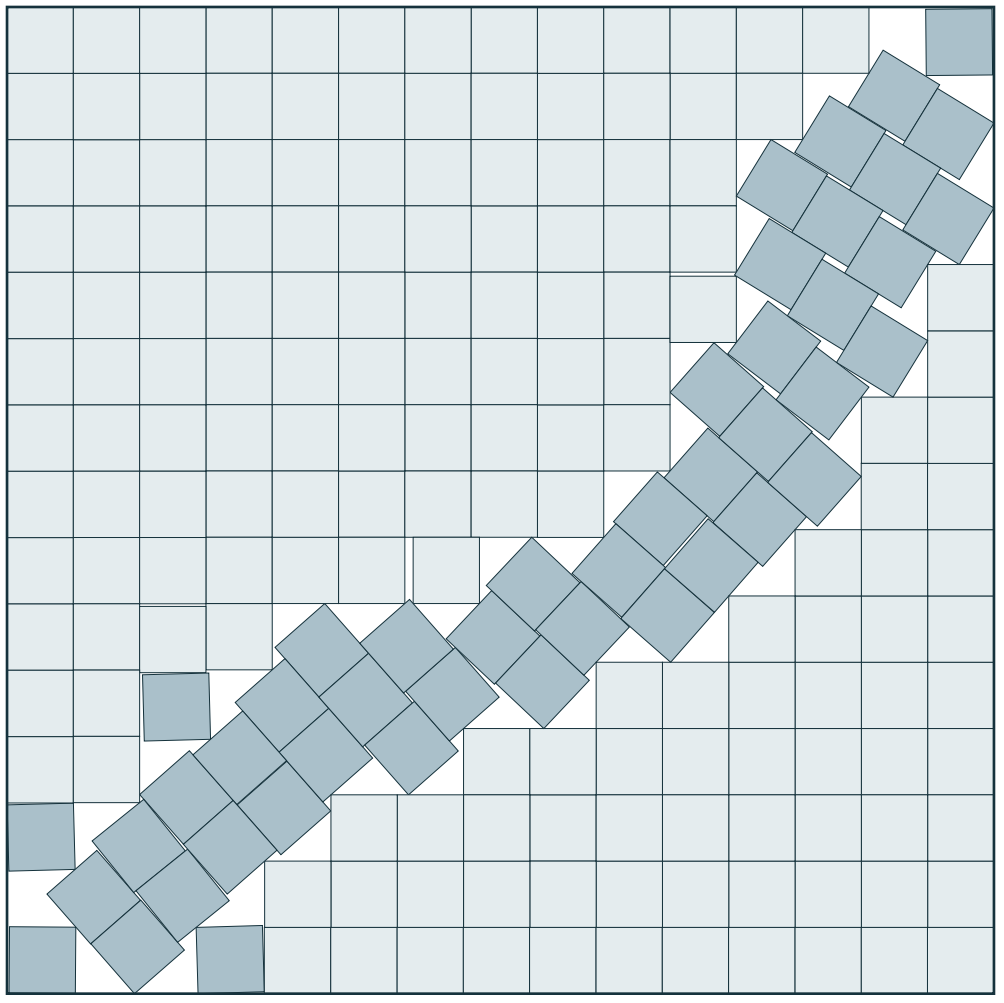
207 squares. A smaller enclosure.

A new complete construction below N=324, compared with an explicit current public witness.

PRIOR PUBLIC CONSTRUCTION

14.885506308841677...

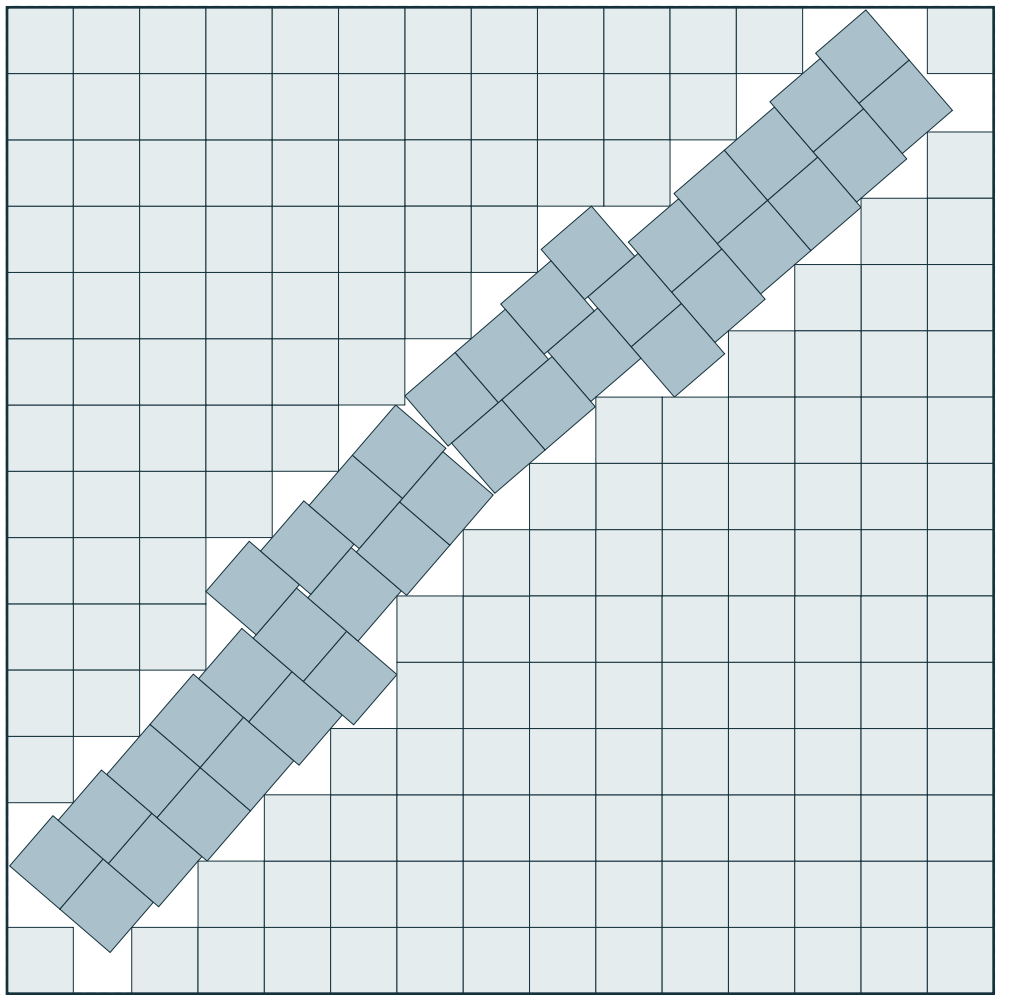
Nate Chaoweeraprasit / SQUISH / issue #481



NEW VERIFIED CONSTRUCTION

14.880960373044

PingYou Ltd / side rounded upward to 12 decimals



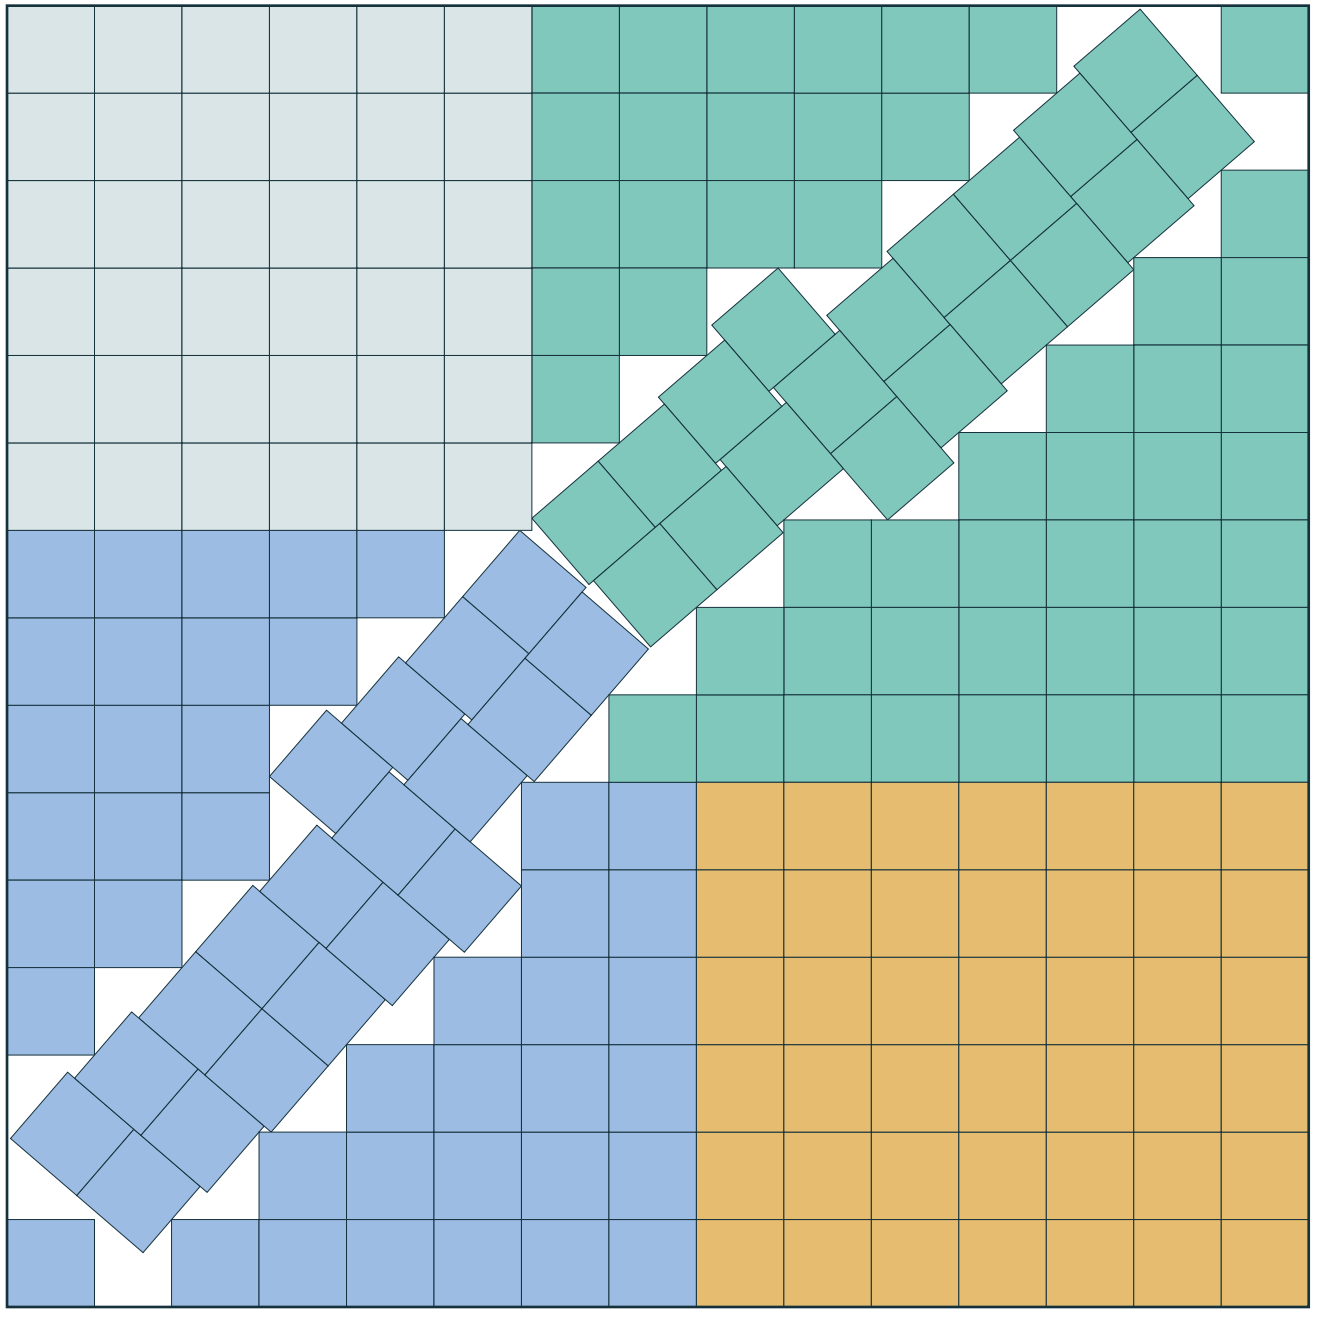
Both drawings use the same unit-square scale.

Side reduced by 0.004545936 (0.03054%). The enclosing area decreases by **0.135316** square units. This is a different assembly, with all 207 unit squares present.

Comparison rechecked on 11 October 2026 against the live Square Packing Atlas, the Squares Project case, and recent public issues. The stronger, not-yet-registered issue #481 witness is the benchmark shown here. Public source: jlevy/squares#481.

Keep the boundary. Change the assembly.

Two differently placed pieces of the same N=70 construction, plus two rectangular grids.



Source patch A	**60**
Source patch B	**69**
7 x 6 grid	**42**
6 x 6 grid	**36**

60 + 69 + 42 + 36 = 207

The change that mattered

The search retained alternative pieces with the same square count. A slightly larger source piece had a boundary that fitted its partner better. Selecting only the smallest bounding rectangle had discarded that option.

The actual geometry

Before the small certification guard, patch A fits in (7+f) x (8+f); patch B fits in (8+f) x (8+f) and is translated by (6,6). Their rectangles overlap by (1+f) x (2+f), but the retained unit squares do not overlap. Here f = 0.88096037155557959...

Exact verification

Every coordinate is reconstructed from the included N=70 source. Three separate implementations check all **21,321 square pairs** and all walls: vertex projections, support radii, and polygon intersection. The prior public witness and the source are also checked.

A center-and-container dilation of $1 + 10^{-10}$ resolves numerical source contact. Square sides remain exactly one. The displayed new side includes this guard.

Source construction: Ryan Xu; the exact N=70 source is retained from Evan Daniel's repository. Full provenance, exact side fraction, reproducible checks and the pinned comparison witness accompany this PDF.
